PEMEX Signs Deal with CHMR for New Non-Hydraulic Shale Oil Extraction System Designed to Safely Replace Hydraulic Fracturing

Houston, TX—August 9, 2012—Chimera Energy Corp (OTCBB: CHMR) announced today that they have executed a Memorandum of Understanding with PEMEX, also known as Petroleos Mexicanos, regarding the utilization of CHMR's revolutionary exothermic Non-Hydraulic Extraction method throughout Latin America. The Non-Hydraulic Extraction method is a revolutionary Shale Oil extraction technology designed to safely and economically replace hydraulic fracturing (AKA fracking and fracing) without negative environmental impacts. The new process uses no water.

PEMEX is the largest company in both Mexico and all of Latin America. Some of the largest concentrations of Shale Oil in the world are located throughout Latin America. The MOU precedes a supplemental encompassing agreement.

Non-Hydraulic Extraction has recently emerged to be asserted as a cheaper and more effective extraction method that does not affect groundwater at all. Chimera Energy Corp is in the process of reengineering this new method for mass production, relicensing and sales. For a description of how Non-Hydraulic Extraction works, high-speed broadband users may visit www.zerowaterfracking.com

Or you may alternatively visit www.chimeraenergyusa.com/investors.html

Chimera Energy Corp is a Texas corporation listed on the OTCBB under the trading symbol CHMR. Chimera Energy Corp (CHMR) acquires, develops, licenses and sells new energy technology and products that are designed to profit from the current domestic shale oil boom. CHMR competes in an industry sector that includes Halliburton (NYSE: HAL), Schlumberger (NYSE: SLB), EnCana Corporation (NYSE: ECA) and Continental Resources, Inc. (NYSE: CLR).

PEMEX and CHMR Collaboration on New Non-Hydraulic Shale Oil Extraction System Begins Monday in Mexico City

Houston, TX—August 10, 2012—Chimera Energy Corp (OTCBB: CHMR) has announce that Company management has been scheduled to directly meet with PEMEX associates in Mexico City beginning this Monday regarding a collaboration for utilizing CHMR's revolutionary exothermic Non-Hydraulic Extraction method throughout Latin America. The initial deal between the two companies was publicly announced yesterday. The Non-Hydraulic Extraction method is a revolutionary Shale Oil extraction technology designed to safely and economically replace hydraulic fracturing (AKA fracking and fracing) without negative environmental impacts. The new process uses no water.

PEMEX is the largest company in both Mexico and all of Latin America. Some of the largest concentrations of Shale Oil in the world are located throughout Latin America. The MOU precedes a supplemental encompassing agreement.

Non-Hydraulic Extraction has recently emerged to be asserted as a cheaper and more effective extraction method that does not affect groundwater at all. Chimera Energy Corp is in the process of reengineering this new method for mass production, relicensing and sales. Tom,

Last line, first paragraph: "Under the initial deal, the parties agreed that PEMEX will provide the first location for utilizing the new system in the Western Hemisphere."

I dont have any documents supporting this.

New Deal Would Utilize CHMR's Non-Hydraulic Shale Oil Extraction System at PEMEX Location

Houston, TX—August 13, 2012—Chimera Energy Corp (OTCBB: CHMR) disclosed that Company management had arrived in Mexico City today for direct meetings with PEMEX to collaborate on utilizing CHMR's revolutionary exothermic Non-Hydraulic Extraction system throughout Latin America. The initial deal between the two companies was publicly announced last week. The Non-Hydraulic Extraction system is a revolutionary Shale Oil extraction technology designed to safely and economically replace hydraulic fracturing (AKA fracking and fracing) without negative environmental impacts. The new process uses no water. Under the initial deal, the parties agreed that PEMEX will provide the first location for utilizing the new system in the Western Hemisphere.

PEMEX is the largest company in both Mexico and all of Latin America. Some of the largest concentrations of Shale Oil in the world are located throughout Latin America.

Non-Hydraulic Extraction has recently emerged to be asserted as a cheaper and more effective extraction method that does not affect groundwater at all. Chimera Energy Corp is in the process of reengineering this new method for mass production, relicensing and sales. For a description of how Non-Hydraulic Extraction works, high-speed broadband users may visit www.zerowaterfracking.com

Or you may alternatively visit www.chimeraenergyusa.com/investors.html

Chimera Energy Corp is a Texas corporation listed on the OTCBB under the trading symbol CHMR. Chimera Energy Corp (CHMR) acquires, develops, licenses and sells new energy technology and products that are designed to profit from the current domestic shale oil boom. CHMR competes in an industry sector that includes Halliburton (NYSE: HAL), Schlumberger (NYSE: SLB), EnCana Corporation (NYSE: ECA) and Continental Resources, Inc. (NYSE: CLR).

Chimera Energy Corp President Comments on Recent Developments

Houston, TX—August 20, 2012—Chimera Energy Corp (OTCBB: CHMR) President Charles Grob stated today: “Chimera and I are committed to implementing our business model as outlined and described in our filings, on our website and in our press releases.

Recent comments from third parties have apparently contributed to a decline in our stock price over the last few trading sessions. Many of those comments have been made by anonymous bloggers and admitted shorters, and they have likely profited from the decline.

There will always be Naysayers in any new business venture, and we have ours. I and all those associated with Chimera are excited about our prospects and encouraged by our progress. We are moving forward at a deliberate pace!”

President Grob has just returned from fruitful meetings in Mexico City, where PEMEX and Chimera have begun to collaborate on utilizing CHMR’s revolutionary exothermic Non-Hydraulic Extraction system throughout Latin America. The Non-Hydraulic Extraction system is a revolutionary Shale Oil extraction technology designed to safely and economically replace hydraulic fracturing (AKA fracking and fracing) without negative environmental impacts. The new process uses no water. As a result of the meetings, PEMEX has already identified using the new process on Chicontepec Formation wells. The Chicontepec Formation is considered Mexico's largest certified hydrocarbon reserve, totaling more than 139 billion barrels of oil.

President Grob is scheduling to follow up with a meeting in Houston with Dr. Nestor Martinez Romero, Commissioner of the National Commission of Hydrocarbons of Mexico, also known as the CNH. Dr. Romero has already voiced his support for the new technology, saying it could be a “game changer for Mexico’s oil production”.

Non-Hydraulic Extraction has recently emerged to be asserted as a cheaper and more effective extraction method that does not affect groundwater at all. Chimera Energy Corp is in the process of reengineering this new method for mass production, relicensing and sales. Due to the recent positive developments in Mexico, the Company now expects to utilize their new relationship with Weis S.A. to complete much of this work in Mexico City. President Grob expects to disclose these new developments as they are finalized.

Chimera Energy Corp Sets up Non-Hydraulic Extraction System Assembly in Poza Rica at Chicontepic Basin

Houston, TX—September 13, 2012—Chimera Energy Corp (OTCBB: CHMR) announced today that Company consultant Weis S.A. has engaged Alta Maquinaria SA de CV in Poza Rica for final fabrications and assembly of the main equipment to be used for Non-Hydraulic Shale Oil Extraction at the Chicontepic Basin in Mexico. Earlier this week, Chimera Energy Corp management announced that they have formulated a 90-day schedule under the guidance of Weis S.A. for the first deployment of Non-Hydraulic Shale Oil Extraction in the Chicontepic Basin. This basin is considered Mexico's largest certified hydrocarbon reserve, totaling more than 139 billion barrels of oil (22.1×10⁹ m³).

Chimera Energy Corp's Non-Hydraulic Extraction system is an unprecedented Shale Oil extraction system designed to safely and economically replace hydraulic fracking (AKA fracturing and fracing) without negative environmental impacts. The new process uses no water and also does not use steam, LPG gel, natural gas or the pumping of anything hot into the well.

Well data shows that the first wells targeted for use of Non-Hydraulic Extraction may be ideal for Non-Hydraulic Extraction versus hydraulic fracking, even beyond the environmental positives. A majority of Chicontepic Basin wells show to have extremely large pocket reserves off of the main well bore, which may be easier to open up with the focused pressures designed into the Non-Hydraulic Extraction system as opposed to regular hydraulic fracking. The Company plans to use the resulting data from Mexico to further proliferate the new technology worldwide.

Non-Hydraulic Extraction has recently emerged to be asserted as a cheaper and more effective extraction method that does not affect groundwater at all. Chimera Energy Corp is in the process of reengineering this new method for mass production, relicensing and sales. For a description of how Non-Hydraulic Extraction works, please visit www.zerowaterfracking.com
